<div class="container">
<h2>Welcome to Forest Awareness Network</h2>
<p>
Forests are one of the most valuable natural resources on Earth.
They provide oxygen, support wildlife, regulate climate,
and help maintain ecological balance.
</p>
<p>
Our mission is to spread awareness about forest conservation,
encourage tree plantation activities,
and inspire people to protect biodiversity.
</p>
<h3>Our Objectives</h3>
<ul>
<li>Promote forest conservation.</li>
```

```
<li>Create awareness about wildlife protection.</li>
<li>Encourage community participation.</li>
<li>Support environmental sustainability.</li>
</ul>

placeholder="Why do you want to volunteer?"
rows="4"></textarea>
<button type="submit">
Register
</button>
</form>

<br>
<a href="login.jsp">
Already Registered? Login
</a>
</body>
</html>
```

LoginServlet.java:

```
package com.example.web;
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
public class LoginServlet extends HttpServlet {
   protected void doPost(HttpServletRequest request,
         HttpServletResponse response)
         throws ServletException, IOException {
      String email = request.getParameter("email");
```

```
        HttpSession session = request.getSession();
        String savedEmail = (String) session.getAttribute("email");
        if(email.equals(savedEmail))
        {
           response.sendRedirect("index.jsp");
        }
        else
        {
           response.getWriter().println("<h2>Invalid Email</h2>");
        }
     }

}
```

RegisterServlet.java:

```
package com.example.web;
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
public class RegisterServlet extends HttpServlet {
   protected void doPost(HttpServletRequest request,
         HttpServletResponse response)
         throws ServletException, IOException {

      String name = request.getParameter("name");
      String email = request.getParameter("email");
      String phone = request.getParameter("phone");
      String gender = request.getParameter("gender");
      String message = request.getParameter("message");
      HttpSession session = request.getSession();
      session.setAttribute("name", name);
      session.setAttribute("email", email);
      session.setAttribute("phone", phone);
      session.setAttribute("gender", gender);
      session.setAttribute("message", message);
      response.sendRedirect("login.jsp");
   }

}
```

Mysql querry:

```
CREATE DATABASE forest_network;
USE forest_network;
CREATE TABLE volunteers
(
   id INT AUTO_INCREMENT PRIMARY KEY,
   name VARCHAR(100) NOT NULL,
   email VARCHAR(100) UNIQUE NOT NULL,
   phone VARCHAR(15) NOT NULL,
   gender VARCHAR(20),
   message TEXT
);
```

OUTPUT:

id	name	email	password	gender	phone
1	Arjun	arjun@gmail.com	green123	Male	9876543210
2	Meera	meera@gmail.com	forest@123	Female	9123456780
3	Karthik	karthik@gmail.com	nature456	Male	9998887776

RESULT:

Thus, To create a Database connectivity using Servlet & JSP for your web application is implemented and the output is verified successfully.
